

107 TIMBERLAND RIDGE BLVD.  
LAFAYETTE, LA 70507

PH: 337.412.4208

I have been in the construction industry for nearly 20 years both as a survey manager and with construction crews for large road building projects. I have experience building 3D project models and using many design software's. In addition, working for Trimble and Leica dealerships taught me how to use Trimble, Leica, and Topcon. Trimble has by far the most durable and easy to use products for construction hands down. I have personally baseball bat swung a Trimble GPS Receiver into the cement and successfully took an accurate measurement to prove beyond a shadow of a doubt Trimble's superior durability over Topcon or Leica.

This experience makes me uniquely qualified to make the most informed construction technology purchase decision. Now that I own DG Hauling and Construction Company and self-perform commercial site work all I buy is Trimble. We deliver exceptional results to our customers so when I spend my money I require excellence in products, service and training. SITECH Louisiana delivers excellence in whatever DG needs every time.

SITECH Louisiana's dealership provides advantages to DG that cannot be understated. I absolutely receive world class sales, support, and training from SITECH Louisiana team of construction experience instructors who were Surveyors, Superintendent, and Data Modelers. SITECH Louisiana has salesman who genuinely want to do the right thing and focus on their customers return on investment.

I can use any of the others and make any of the cheaper products work where others cannot, but I still choose Trimble and SITECH Louisiana.
