

We here at Gilchrist Construction have been using Trimble equipment for the past ten years and hands down have doubled our productivity and our utilization of our construction equipment because we finish as we go, no more going back and restaking an area to see if its close the Trimble equipment's performance and service is the most reliability and user friendly we think that's on the market and we would suggest anyone give it a try, the saving in the first year would offset the cost of the gps equipment,(i.e. no more restake, survey crews or lost productivity) Finish as you go.
